

IDC4251C Module 6 Project

This project is presented in Ch. 6 of the Microsoft Power BI video course.

This assignment uses a starter Power BI workbook file named "Module6-starter.pbix" to create data visualizations. The data files are the same as the files used for the Module 5 Part 2 project and can be found in the GitHub Classroom repository.

Complete the project through the end of the Chapter 6 content (Video 6.30 "Wrap-Up"). Save your project file as "visuals.pbix" and push your completed workbook to the repo.

NOTE: As with Module 5 Part 2, you will need to change the data source location based on where you store your data files before starting the project. The steps are the same as in that assignment.
